

## Cabling Infrastructure: New Year, New Goals

### PatchRunner™2 Enhanced Vertical Cable Manager with Vertical Patching ensures cable longevity to reduce costs and save you time (and energy)

Poor cable structuring can lead to several problems including a short lifespan of your cables and a large expense in your budget.

Properly installing your cable management system from the beginning will ensure that you get it right the first time and spare yourself the headache later.

With the introduction of the PatchRunner™2 Enhanced Vertical Cable Manager with Vertical Patching, your cables will live up to their expectation in an organized fashion, saving space and allowing additional cables to be utilized.

The picture to the left shows what poor cable management practice looks like. Scary, right?

The last thing that you want to do is stress over major downtime and an efficiency reduction.

With the start of a new year, your physical infrastructure deserves a refresh to ensure that you are set up for success. We bet you're wondering where to begin, here's your answer.

Panduit has the PatchRunner™2 Vertical Cable Manager family, the cable management foundation you need to drive efficiency to your cable infrastructure. The new PatchRunner™2 Enhanced Vertical Cable Manager with Vertical Patching will erase your stress and launch you into the new year on the right foot.

PE2V features include:

- High density manager
- Significant additional cable capacity
- 0 RU patching design
- Color options – black or white
- Ships partially assembled for configuration versatility

Panduit® PatchRunner™2 Enhanced Vertical Cable Manager with Vertical Patching provides a comprehensive architecture that helps regulate access to network equipment, efficiently organize cables and ensure continuous coherent performance.
