
The Safe and Secure Campus

More Meaningful Connections

Connected Learning

Technology is transforming teaching and enhancing the learning experience for students. Infrastructure underpins this transformation, supporting instructional needs and the expectations of tech-savvy students while helping to create a safe and secure learning environment.

Creating a Safer Environment

Safety and security in school settings is a top priority. Comprehensive monitoring systems protect the campus environment - from security cameras that keep a watchful eye, to controlled door access and automatic safety triggers. It's all part of a global effort to keep students, faculty, and staff safe. Ease of use and integration are key to maximizing functionality and this requires a network infrastructure that can tie different elements together to maintain critical security systems at all times.

More Meaningful Technologies

The Panduit Solution

Panduit solutions are helping educational institutions across the world create a network infrastructure that performs reliably to give the reassurance needed that schools and campuses are fully protected. Panduit's portfolio of industry-leading structured cabling solutions all meet the high-performance requirements necessary to protect learning environments, from a full plenum offering for mounting and connecting security cameras in the ceiling, to high-density solutions that provide the space for backup systems in data closets. Designed to save space and work within existing telecommunications rooms and future-proofed to allow for expanding bandwidth and newer technologies, these are long-term solutions that meet both today's and tomorrow's network demands.

More Meaningful Upsides

Connect with Panduit

Panduit Solutions give educational facilities the connected technological performance to provide a safe and secure learning environment for students and instructors alike. Robust, reliable infrastructure supports the systems that protect the campus, providing peace of mind to enable students, faculty and staff to go about the business of educating, confidently and safely. Future-proof performance comes as standard, so you know you can take advantage of advances in security systems without extending your telecommunications room or disrupting academic life.
