

Offshore

More Meaningful Connections

Connected Oil and Gas Exploration and Production

Oil and gas are still the best options for meeting global energy demand and the industry is exploring in challenging locations. From deep water in the tropics to the Arctic Ocean, progress requires engineering innovation to keep pace.

A Platform for Performance

The offshore environment is possibly the most demanding on the planet for the people that work there and the equipment they rely on. As well as the wide ranging and extreme conditions, there are serious safety risks and strict regulations to contend with. Offshore cabling infrastructure needs to perform under constant attack from the elements, and ease of installation and maintenance is a major factor.

More Meaningful Technologies

The Panduit Solution

Thanks to experience of offshore projects and extensive product performance testing against extreme heat, cold, vibration, corrosive agents, salt spray and high winds, Panduit delivers infrastructure solutions that stand up to the demands of the oil platform. Our end-to-end copper and fiber cabling systems offer extended temperature range and enhanced abrasion resistance. Panduit's unique compression grounding system offers flame and spark free installation which is also up to four times faster than exothermic methods. Our portfolio of highly durable wire and cable management products includes stainless steel options for bundling, identifying and fastening cable. This range is complemented by bespoke tooling which along with smart product design, minimizes installation time and helps to ensure the long-term safety and performance of power, control and network infrastructure.

More Meaningful Upsides

Connect with Panduit

Panduit's offshore solutions deliver total reliability, enabling your power, control and communication systems to keep performing in the harshest conditions. All elements of our complete cabling and cable management solution are offshore ready, giving you a solution that exceeds operational requirements and safety regulations. As well as being highly-durable, all parts of the system are designed for easy and quick installation giving you peace of mind that you can hit construction deadlines and get the job done in the tightest of weather windows.
