

# Packaging & Distribution

## More Meaningful Connections

### Connected Food Production

As consumer needs evolve so must the food industry. Ingredients and the techniques needed to process them are changing, and small producers are multiplying driving increased competition. Businesses at every level of the supply chain are evolving to become more efficient.

### Precision in Packaging

Every step of the food production process has to be perfect and the packaging and distribution stage is no exception. Lot and batch traceability must be maintained at all times and product changeovers need careful orchestration. Efficient application of IT is key here and can also deliver performance monitoring that can lead to improved processes.

## More Meaningful Technologies

### The Panduit Solution

Panduit has meaningful experience in food packaging and distribution plants and we have developed a unique solution comprising hardware, infrastructure and software. This uses a Pre-Configured Micro Data Center to form a link between the production and corporate branches of your network, ensuring uptime and feeding data hungry applications. Our range of cabling, and cable management includes options that exceed food industry standards. With many process control and sensory devices linked to the network, our IntraVUE™ software offers real-time monitoring and data collection with intuitive visualization helping you detect problems early and optimize packaging and distribution processes.

## More Meaningful Upsides

### Connect with Panduit

Panduit can help you unlock a new level of performance in your packaging plant allowing you to further automate processes and harvest the data you need to iron out inefficiencies. The quality of every aspect of our solution gives you the confidence to run a lean operation, knowing that the risk of downtime is minimized.
