More Meaningful Connections

Connected Food Production

As consumer needs evolve so must the food industry. Ingredients and the techniques needed to process them are changing, and small producers are multiplying driving increased competition. All parts of the supply chain are evolving to become more efficient.

Processing Standards

Food production is one of the most highly regulated industries in existence. In the processing plant or factory, every part of your infrastructure needs to comply with the most rigorous standards. At the same time, efficiency and reliability must be maintained in order to stay competitive.

More Meaningful Technologies

The Panduit Solution

Panduit has substantial experience in the food sector and has developed many top performing products to meet the standards required. Our metal detectable cable ties and mounts are identifiable by X-ray and metal detectors, and have a distinct blue color for easy visual detection too. Panduit stainless steel cable ties and permanent identification solutions last the distance in all environmental conditions, and versatile abrasion protection preserves the integrity of cabling and components. We have developed a range of NEMA 4X and IP67 rated enclosures for a completely consistent and compliant infrastructure. And a Panduit solution saves up to 30% of control panel space and rationalizes electrical and network wiring for efficient operation and maintenance.

More Meaningful Upsides

Connect with Panduit

A Panduit infrastructure solution is designed with safety and hygiene in mind to support your HACCP approach. Every part is engineered for performance and longevity, keeping running costs down by preserving uptime and maintaining safety. Our commitment to understanding the food industry's regulatory environment, has allowed us to develop a comprehensive portfolio of products and solutions that keep you compliant.
