

Refining

More Meaningful Connections

Connected Food Production

As consumer needs evolve so must the food industry. Ingredients and the techniques needed to process them are changing, and small producers are multiplying driving increased competition. Businesses at every level of the supply chain are evolving to become more efficient.

Refining Processes

Efficient and dependable electrical power and grounding are key building blocks for the refinement of raw food products.

More Meaningful Technologies

The Panduit Solution

Panduit's experience in the bulk food processing industry and our comprehensive range of products, mean we have the ingredients to deliver unrivalled power infrastructure solutions for the refining plant. The static charge build up caused by dry materials means grounding is essential. Panduit's direct burial grounding system exceeds all relevant electrical standard and uses compression connections meaning it is fast and easy to install without the need for welding. As well as a full range of cabling and connectors, the Panduit solution includes everything you could ever need to protect, manage and permanently identify routed cables. This includes a comprehensive portfolio of products and services for the identification and control of electrical and mechanical hazards.

More Meaningful Upsides

Connect with Panduit

Panduit products are engineered to keep working in the most rigorous of industrial environments so you can be sure your power infrastructure will preserve plant uptime throughout a long service life. Our experience of the plant lifecycle has enabled us to develop the complete system for identification and cable management that enables maintenance and improvement to take place with the minimum of work. We understand your regulatory and safety requirements, and our solutions are engineered to ensure you exceed these.
