## **Power over Ethernet Extenders on Market for Long Reach PoE Connectivity up to 2,000 Feet.**

*Enabling extended Ethernet and PoE reach beyond traditional distances.*

**TINLEY PARK, IL (September 30, 2018)** – Panduit Corp. launches the Power over Ethernet (PoE) Extenders Series over one copper cable. The robust, validated architecture provides customized solutions which allow network connectivity to reach up to 610 meters over one standard, twisted 4-pair copper cable. Paired with a transmitter and a receiver, the PoE Extender solution eliminates the costs of additional labor and extra product pieces while also providing deployment flexibility for IP devices throughout your architecture.

Reaching up to 2,000 feet, the extenders deliver uninterrupted data from switch to IP device supporting Multicast, Unicast, and Broadcast offering more than triple the distance of the normal 100-meter data transfer from one host to the next.

Product manager, Sri Senthamarai is eager to bring the PoE Extender Series to the enterprise market, “The goal is to eliminate current obstacles by providing an opportunity for customers to save money as well as a simple-to-install product for long reach limitations.” Targeting enterprise areas such as office buildings, hospitals, schools, and parking lots, IP devices such as security cameras, are ideal for the Panduit Extender Series.
