

Signaling & Communication

More Meaningful Connections

The Connected World of Rail

Millions of people rely on the safe, reliable running of the railways every day. As you maintain these critical connections, you need engineered infrastructure solutions you can rely on to keep performing in the toughest conditions.

Sending a Strong Signal

Signaling and communication runs the railway, making sure safety and punctuality are maintained at all times. For critical systems such as these, only the most reliable infrastructure and components can come into consideration.

More Meaningful Technologies

The Panduit Solution

As well as extensive rail industry experience, Panduit has unrivalled infrastructure products for signaling and communication. Our cabling portfolio is second to none with class-leading shielded copper cabling for harsh environment applications providing a superior infrastructure with a channel headroom guarantee exceeding TIA/ISO standards. This is complemented by a complete range of fiber optic cabling for harsh environments and a comprehensive line of copper physical layer solutions for industrial Ethernet. A wide selection of grounding systems, cable ties and mounts, abrasion protection, and complete labeling systems help to create a comprehensive and cohesive solution.

More Meaningful Upsides

Connect with Panduit

By using a complete and compatible range of the highest-quality infrastructure products, Panduit signaling and communication infrastructure solutions deliver performance, reliability and compliance with industry standards. Vibration resistance, low smoke and halogen-free materials, and industrial grade IT infrastructure can be integrated to meet your specifications.
