

## RapidID™ Network Mapping System

### Cable Documentation. Automated.

Keeping track of patch cord connections can be time-consuming and labor intensive. Labeling, tracing, and troubleshooting are tedious, repetitive, and notoriously prone to human error. All this leads to wasted time, effort, and money.

The available solutions to address these issues are neither practical nor cost-efficient, until now.

RapidID™ is a software-enabled network mapping system from Panduit, the leading provider of network infrastructure for smart, scalable, and efficient connectivity solutions.

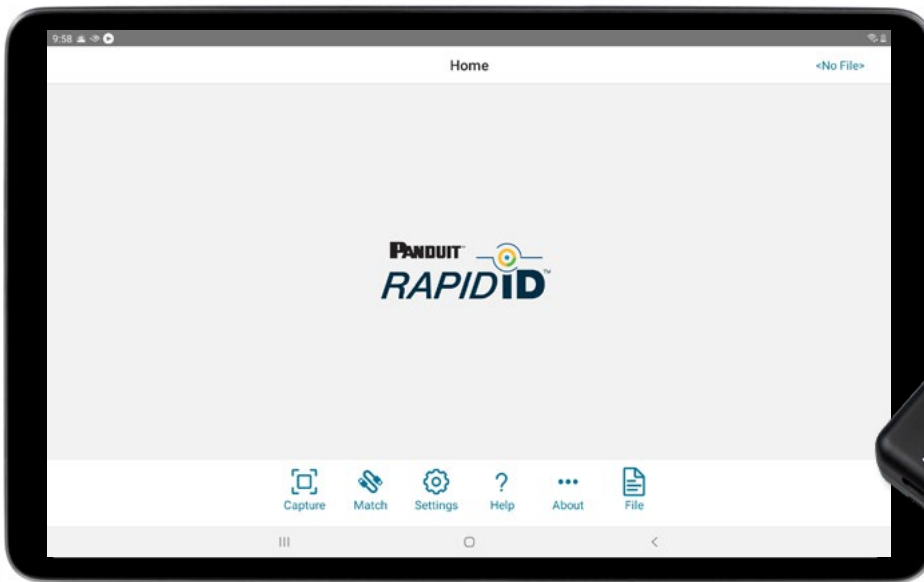

For network engineers and data center managers, RapidID is a practical, affordable alternative to traditional manual approaches. It does not require special panels or cabling, and is ideal for building a new telecom room, locating installed cabling, or replacing a network switch.

#### The RapidID solution includes:

- Bluetooth-enabled handheld scanner
- Feature-rich mobile app
- Pre-labeled copper and fiber patch cords for easy installation and identification

RapidID™ Bluetooth-enabled handheld scanner and pre-labeled cable

#### Key Features

**Patch cords are pre-labeled**

**Easy-to-use scanner**

**Feature-rich mobile app**

#### Benefits

Automates labor-intensive and error-prone cable documentation process that can lead to an outage

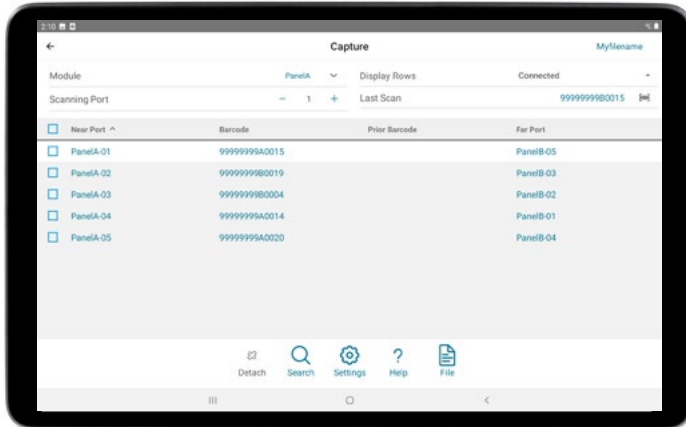

- Saves time on tracing, labeling, and documenting
- Free-up network engineers to focus on more rewarding and strategic initiatives
- Reduce time and cost of patch cord documentation by up to 50%\*
- Control cost and risk associated with cable installation and management

\*Panduit internal time study, May 2021.

## RapidID: Easy As 1, 2, 3...

Here is how it works:

- 1 Install Panduit cables that feature unique *RapidID* barcode labels.
- 2 Download the *RapidID* mobile app from iOS or Android app stores to a tablet device.

The mobile app **captures and verifies** cable locations as they are scanned. Data can be exported to reduce or eliminate manual, error-prone data entry.

The mobile app **matches** the opposite end of a scanned cable. The software offers notifications when the right end is found, which expedites a tedious process to free up network engineers for more rewarding initiatives.

- 3 Scan barcodes using the Bluetooth-enabled *RapidID* handheld scanner to:
  - Quickly and accurately capture and document new cable installations without the need for manual data entry.
  - Trace existing cables to find the opposite endpoint without having to pull on them/risk disconnecting them and causing a network outage.

Stop Labeling. Start Saving.

### Ordering Information

Part Number	Description
RPDCSN	Bluetooth Barcode Scanner includes batteries, case, and charger
